

## Asian Journal of Mycology News

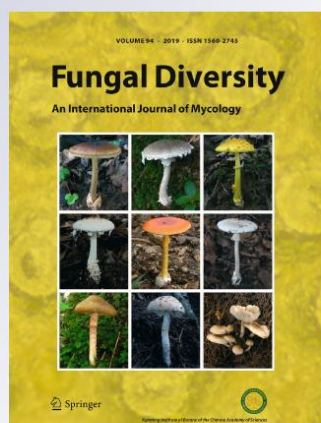

### New important publication from Asia

One stop shop II (OSS2), the second in the series, provides updated trees and information on important plant pathogenic species and is an up-to-date compilation of the important genera. It will be accompanied by a web-page named <https://onestopshopfungi.org/> where information will be continually updated.

*One stop shop II: taxonomic update with molecular phylogeny for important phytopathogenic genera: 26–50 (2019)*

 Springer

OSS2 or One stop shop II was published in the Fungal Diversity in January 2019. This is the second paper in a series focused on providing a stable platform for the taxonomy of phytopathogenic fungi. Twenty five genera are included in this article and for each genus a taxonomic background, diversity aspects, main symptoms of the diseases, species identification and classification based on molecular phylogeny and recommended genetic markers are provided. This study elevated the varieties of the genus *Boeremia* to species level. This article provides a better understanding about phytopathogens and is useful for researchers and plant pathologists.

One stop shop II: taxonomic update with molecular phylogeny for important phytopathogenic genera: 26-50. Fungal Diversity 94: 41-129 (2019).

Genera included in OSS2

*Alternaria, Bipolaris, Boeremia, Botryosphaeria, Calonectria, Coniella, Corticiaceae, Curvularia, Elsinoe, Entyloma, Erythricium, Fomitiporia, Fulvifomes, Laetisaria, Limonomyces, Neofabraea, Neofusicoccum, Phaeoacremonium, Phyllosticta, Phellinotus, Plenodomus, Pseudopyricularia, Tilletia, Venturia and Waitea.*
